QUALITY POLICY OF VISILAB

We develop unique process sensors and data acquisition systems at the highest level of technology. Accurate and dependable measurement and control of industrial processes depends on high reliability of sensors, a long service interval, easy maintenance, impeccable servicing and spare parts' availability. Visilab's solution to these requirements is to design all sensors for an exceptionally long service interval and by using the most reliable parts commercially available. We try to find out the needs of our customers as accurately as possible and to predict their needs in advance, by looking from the customer's point of view. In that way, our products serve our customers in a most productive way. This quality policy is developed continuously by tracking and measuring the impacts of the present system. We develop new solutions to guarantee the functionality of our quality system.
